

EVENTFORCE MANAGEMENT SYSTEM

PHASE 3

UI/UX Development & Customization

Lightning application, navigation, reports and dashboard

Elaborated Salesforce Implementation Document

Prepared as a detailed, project-specific submission document

1. Phase Overview

Create a usable, organized and analytics-enabled Salesforce interface for EventForce users.

2. UI/UX Objective

The UI/UX phase converts the configured backend into a practical Salesforce Lightning workspace. The goal is to give users a single navigation experience for core event records while providing reports and dashboards for operational monitoring.

3. Lightning App Design

Configuration	EventForce implementation
App	Event Planner Management System / Event Planner workspace.
Core navigation	Event, Client, Vendor, Venue, Feedback.
Analytics navigation	Reports and Dashboards.
Audience	Configured Salesforce users according to assigned profiles/permissions.

4. Lightning App Creation — Implementation Steps

- Open Setup and search for App Manager.
- Choose New Lightning App.
- Enter the application name and configure the app options.
- Configure the available utility items according to the project requirement.
- Move Event, Client, Vendor, Venue, Feedback, Reports and Dashboards into the selected navigation items.
- Assign the appropriate Salesforce profile(s).
- Save and Finish.
- Verify the app from the App Launcher and confirm that the navigation menu exposes the expected modules.

5. Navigation Structure

Navigation item	Primary use
Event	Create and manage event records.
Client	Maintain client information.
Vendor	Maintain vendor and service-provider records.
Venue	Maintain venue and availability information.
Feedback	Review client/event feedback.
Reports	Access operational report folders and reports.
Dashboards	View summarized operational metrics.

6. Report Folder & Sharing

- Create the EventForce Report folder from the Reports tab.
- Share the folder with relevant operational roles according to the documented access model.
- The source configuration provides report visibility to Event Coordinator and Vendor Manager roles.

7. Upcoming Events by Month Report

Setting	Documented configuration
Report purpose	See upcoming events and counts by month.
Useful columns	Event Name, Event Date, Event Type, Client, Venue, Event Budget.
Grouping	Event Date grouped by calendar month.
Operational use	Monthly scheduling and event workload visibility.

- The report can be used to identify upcoming event activity and related client/venue information.
- Summary information can support event-count and budget visibility.
- The report becomes a source for the operations dashboard.

8. EventForce Operations Dashboard

- The dashboard provides a visual summary of operational information.
- It uses reporting data to improve visibility into upcoming event activity.
- The broader EventForce design also targets vendor activity and client feedback visibility.
- Dashboard access remains controlled by Salesforce sharing and permissions.

9. UI/UX Design Principles

- Keep core event-management modules accessible from one workspace.
- Separate transaction management from analytics while keeping both in the same app.
- Use reports for detailed records and dashboards for summarized monitoring.
- Expose only the functions appropriate to the user's configured Salesforce access.
- Maintain consistent naming between the project document, application and analytics assets.

10. User Journey Example

An Event Coordinator can open the EventForce app, navigate to Event, create or update an event, associate the Client and Venue, and then use Reports or Dashboards to monitor upcoming work. A Vendor Manager can access the vendor-related navigation and shared reports according to the security model. This demonstrates how Phase 3 connects the backend implementation with daily operational usage.

11. Phase Outcome

Phase 3 delivers the user-facing layer of EventForce: a Lightning application, structured navigation, an operational report and a dashboard. The result is a single workspace for event management and monitoring rather than a collection of disconnected Salesforce configurations.

Implementation Evidence

The following selected visuals are included as supporting implementation evidence. The document layout and narrative are reorganized for a distinct phase-wise submission.

From Setup, enter App Manager in the Quick Find and select App Manager.

Lightning App / navigation evidence.

3. Select the Category as All, search for Events or Events with Client & Venue, select it, and click Start Report.
4. In the outline pane, select the fields mentioned below in the Columns section:
 - Event Name
 - Event Date
 - Event Type
 - Client__r.Name
 - Venue__r.Name
 - Event_Budget__c
5. Remove any unnecessary fields.
6. Toggle Update Preview Automatically.

Reports and dashboard evidence.

Appendix — Phase Checklist

- Lightning app created.
- Core objects added to navigation.
- Reports folder configured.
- Upcoming Events by Month report documented.
- EventForce Operations Dashboard documented.
- Role-based visibility considered in the UI design.
