

EVENTFORCE MANAGEMENT SYSTEM

PHASE 5

Deployment, Documentation & Maintenance

Release readiness, maintenance, troubleshooting and future enhancement

Elaborated Salesforce Implementation Document

Prepared as a detailed, project-specific submission document

1. Phase Overview

Complete the project lifecycle without overstating production deployment, while documenting how the EventForce solution can be maintained and extended.

2. Deployment Status

The documented EventForce project was developed and tested in a Salesforce Developer Edition. Actual production deployment was not performed as part of the implementation. Therefore this document treats production deployment as future release work rather than a completed activity.

3. Deployment Strategy for Future Release

- Review all configuration and metadata before release.
- Validate the data model, automation, Apex and security configuration in a controlled environment.
- Use an appropriate Salesforce deployment mechanism such as Change Sets, Salesforce DX or an established DevOps/CI-CD process.
- Run post-deployment validation and regression testing.
- Confirm profiles, permissions, roles and sharing behavior.
- Plan rollback/recovery steps for critical deployment issues.

4. Project Documentation Package

Documentation area	Coverage
Business overview	Project purpose, objectives and stakeholder needs.
Data model	Objects, fields and relationships.
Automation	Flows, validation rules, formula fields and approval process.
Apex	Triggers, helper class, batch and schedulable processing.
Security	Profiles, roles, permission sets, OWD and sharing rules.
UI & analytics	Lightning app, reports and dashboard.
Testing	Configuration, automation, Apex, data, security and analytics tests.
Maintenance	Monitoring and troubleshooting guidance.
Future scope	Production deployment, integrations, analytics, mobile and scalability.

5. Maintenance & Monitoring

- Monitor record-triggered Flows and scheduled automation for failures.
- Review Apex jobs and scheduled processing regularly.
- Check approval-process behavior after business-rule changes.
- Review validation rules when field or process requirements change.
- Review sharing settings and permissions when organizational roles change.
- Keep event, client, vendor, venue and feedback data accurate and up to date.
- Update documentation whenever configuration or business behavior changes.

6. Troubleshooting Approach

Issue type	Suggested investigation area
Access error	Profile, Permission Set, Role, OWD and Sharing Rule.

Issue type	Suggested investigation area
Flow failure	Flow activation, entry conditions, scheduled path and record values.
Approval issue	Entry criteria, submitter, approver and approval actions.
Apex error	Trigger/class execution, data assumptions and affected records.
Double-booking issue	Venue reference, event date and PreventDoubleBooking logic.
Batch/schedule issue	Apex class, scheduled job and eligible Event records.
Report mismatch	Filters, fields, grouping and source records.

7. Advantages of the Implemented Solution

- Centralized management of Event, Client, Vendor, Venue, Feedback and EventVendor data.
- Reduced manual work through automation.
- Venue conflicts are addressed through programmatic validation.
- Cancellation requests follow a controlled approval process.
- Reports and dashboards improve operational visibility.
- Security controls provide structured record access.
- Validation and migration checks support better data quality.

8. Documented Limitations

- Implementation was completed in a Salesforce Developer Edition for academic purposes.
- Production deployment was not performed.
- Real-world deployment may require additional release/deployment tooling.
- Flows, Apex, approval processes and sharing configurations require ongoing monitoring and maintenance.

9. Future Scope

Future enhancement	Purpose
Production Deployment	Move the tested solution through a controlled release process.
Advanced Event Automation	Extend automation to additional planning and operational activities.
Enhanced Vendor Management	Add deeper vendor tracking and performance management.
Advanced Analytics	Expand reports and dashboards across events, venues, vendors and feedback.
External Integrations	Connect Salesforce with external event, payment or communication services where required.
Mobile Accessibility	Improve convenient event management on mobile devices.
Scalability	Support larger record volumes and user populations.
Continuous Optimization	Regularly improve Flows, Apex, validation and sharing configurations.

10. Submission & Demo Readiness

- Final project PDF prepared.
- Phase-wise documentation prepared.
- Salesforce source code and metadata organized for GitHub submission.
- Demo video recorded from the Salesforce org.
- GitHub repository link prepared for Skill Wallet.
- Demo video link prepared for Skill Wallet.
- Project title is kept consistent across documentation.
- Implemented features are separated clearly from future scope.

11. Recommended Demo Sequence

- Introduction — project title and purpose.
- App Overview — show the EventForce/ Event Planner Lightning app and core tabs.
- UI Demonstration — show record creation, navigation and validation.
- Automation — demonstrate the 3-day reminder and cancellation approval process.
- Apex — show the venue double-booking logic and event-completion processing.
- Security — explain profiles, roles, permission sets, OWD and sharing.
- Reports & Dashboard — show upcoming events and operational analytics.
- Conclusion — summarize the implemented capabilities and future scope.

12. Phase Outcome

Phase 5 closes the documented implementation lifecycle by consolidating deployment readiness, documentation, maintenance, troubleshooting, limitations and future scope. The result is a structured project package that can support evaluation, demonstration and future controlled deployment.

Implementation Evidence

The following selected visuals are included as supporting implementation evidence. The document layout and narrative are reorganized for a distinct phase-wise submission.

to show the steps from above activity.

Activity 4: Creating other Role Under Event Admin Role

- 1.Create Another Role.
- 2.Create a Role with the Name "Client".
- 3.Below the Event Admin click on add role and enter the label name as a "Client" and role name, will be Automatically populated and click on save.
- 4.Follow the steps from above Activity.

Milestone 16 -User:

What is a user?

A user is anyone who logs in to Salesforce. Users are employees at your company, such as sales, reps, managers, and IT specialists, who need access to the company's records. Every user in Salesforce has a user account. The user account identifies the user, and the user account settings determine what features and records the user can access.

Project documentation / maintenance evidence.

- 3.Give the Label name as " Event_Sharing_For_Vendors"
- 4.Rule name is auto populated.
- 5.In step 3 : Select which records to be shared, members of " Roles ">> " Event Coordinator"
- 6.In step 4: share with, select " Roles " >> " Vendor Manager"
- 7.In step 5 : Change the access level to " Read Only ".
- 8.Click on Save.

Final implementation documentation evidence.

Appendix — Phase Checklist

- Deployment status clearly documented.
- Future deployment strategy documented.
- Maintenance and monitoring checklist included.
- Troubleshooting matrix included.
- Advantages and limitations documented.
- Future scope documented.
- Demo sequence and submission checklist included.
